

A TEAM OF EXPERIENCED PEOPLE COMING FROM THE PHARMACEUTICAL INDUSTRY

A senior professional, previously involved in Research or in the Pharmaceutical industry, manages each department. Because of their know-how and experience, the services they offer are always of quality.

DIDIER MULLER

He created D2M Santé in 1993, and presently acts as the General manager of the company. Apart from this executive role, he manages the R&D and manufacturing departments.

A PARTNERSHIP WITH AN INDEPENDENT COMPANY

For more than 10 years, D2M Santé has acted as an independent partner for the pharmaceutical development of medicinal products. As such, D2M Santé ensures the complete pharmaceutical development of medicinal products and of investigational medicinal products. Because of its independence, your projects are managed in total confidence. Up to date, both National and International pharmaceutical companies have entrusted D2M Santé with their projects.

The company is mainly involved in the following :

- Dosage form development and manufacture of pilot batches
- Analytical development and Quality Control
- Manufacturing and packaging of clinical supplies
- Expertise of the pharmaceutical application files

A LEADING EDGE FACILITY WITH MODULAR UNITS

The company has made major investments for many years and is currently scheduling more in the near future. D2M Santé is permanently increasing the means at its disposal in order to answer any requirements from companies in terms of quality and efficacy.

Flexibility and adaptability

A high level of flexibility in the equipment used is needed when manufacturing batches of different size. D2M Santé is equipped in such a way that manufactured batch sizes may range from 1 to 100 fold, depending on your project specifications.

Production Capacity for all dosage forms

The equipment at the D2M Santé's disposal allows the manufacture of solid dosage forms, semi-solid dosage forms and liquid dosage forms packaged according to your project specifications. The company is one of the market leaders for the manufacture of complex dosage forms.

Highly qualified Equipment

The entire D2M Santé installation (premises and equipment) is qualified and regularly maintained. The premises fulfil the European pharmaceutical requirements for the reception and storage areas for both starting materials and finished products and, for the organisation of production units.

A GLOBAL KNOW-HOW

1

Dosage form development and manufacture of pilot batches

The R&D department may help you in optimising the manufacturing formula of existing products or in ensuring the complete pharmaceutical development of new products. Processes are put in place in such a way that the scale-up to batches of industrial size is always guaranteed.

3

Manufacturing and packaging of clinical supplies

Using each of the D2M Santé facilities, the unit dedicated to clinical supplies, carries out the pharmaceutical development, manufacture and packaging of your investigational medicinal products.

2

Analytical development and Quality Control

D2M Santé ensures the complete analytical development of your products by using analytical methods validated according to current ICH guidelines. D2M Santé also conducts routine quality control and stability studies. The latter are performed under ICH long term and accelerated conditions on both starting materials and finished products.

4

Expertise of the pharmaceutical application files

D2M Santé may help you in preparing the pharmaceutical part of your marketing application files. Its "know how", recognised by major pharmaceutical companies, includes expertise in the development of all dosage forms.

The concentration of activities at the same site creates a real flexibility and allows the management of multidisciplinary projects.
